Visual Snow Initiative

Bern, 06/23/2025

Study report

Dear Visual Snow Initiative,

I would like to thank you for supporting our study investigating visual snow syndrome using a pharmacological approach.

With this letter I would like to report that, unfortunately, we have so far not been able to start study recruitment due to unforeseen administrative and logistical obstacles that have substantially delayed submission to the relevant authorities.

Currently, we are trying to identify alternative approaches to make the study possible including close cooperation with professional research units at our university.

However, I cannot guarantee a start of this study soon and we are therefore also exploring alternatives to answer the clinical and research questions underlying visual snow syndrome.

Again, I would like to thank Visual Snow Initiative and its beneficiaries for believing in our dedication to better understand visual snow syndrome and search for treatment strategies.

Best

Prof. Dr. med. Christoph Schankin
